

## Web-based Timesheet Management Solution

i-Timesheets In-house is an "off-the-shelf" application that you purchase and install on your own web server as either an intranet or Internet web site.

### I-TIMESHEETS IN-HOUSE IS IDEAL FOR:

- Businesses looking for an in-house timesheet solution available via the web, where timesheet information is stored locally.
- Medium to large businesses or government departments that require the extra security and control that can only be obtained by running a system on your own network.
- Businesses requiring advanced integration with other internal business systems.
- Any business looking for a professional and easy-to-use timesheet management system installed locally.

### TESTIMONIAL:

*"i-Timesheets has made a huge difference to our business. We used to have little visibility of how things were tracking during the month and were losing the capture of time due to an inefficient and clunky system. We are wrapped with i-Timesheets.*

*When we were searching for a Timesheeting product, our credentials were that it must be SQL Server based, simple to use and accommodate the complexity of a company recording both billable and non-billable time.*

*We have found i-Timesheets a great cost effective and easy to use product, everyone in our organisation, from our Office Manager to our Managing Director records their time in i-Timesheets"*

**Shafraz Nasser - Business Mechanix**

### I-TIMESHEETS IN-HOUSE PRODUCTS:
